Bridge Condition on Locally Maintained Roads
St. Louis Metropolitan Area
August 2015

This map shows the condition of bridges on locally maintained roads within the East-West Gateway region. A functionally obsolete bridge is no longer adequate by design standards for the tasks that it was designed for and a structurally deficient bridge has a structural defect present that needs to be addressed. Neither bridges that are structurally deficient nor functionally obsolete are necessarily unsafe. Unsafe bridges are closed.

Bridge Condition
- Not Deficient
- Structurally Deficient
- Functionally Obsolete
