12” Transmission Mains under the Meramec River

01.29.2016
Moving Forward

- Explore additional interconnections with the City of St. Louis. Location(?) and pressure challenges.

- Elevate the intake platforms at the South and Meramec Plants. Capital project – will take time.

- Install another transmission main under the Meramec River. A plan has been developed.

- Investigate options for operating the distribution system during these types of events. Push more water from Central County into South County.
