

# Bridge Condition on Locally Maintained Roads

St. Louis Metropolitan Area

June 2021

This map shows the condition of bridges on locally maintained roads within the East-West Gateway region. Good, fair and poor are defined in accordance with the Pavement and Bridge Condition Performance Measures final rule, published by the Federal Highways Administration (FHWA) in January of 2017. Bridge condition is determined by the lowest rating of National Bridge Inventory (NBI) condition ratings for the deck, superstructure, substructure, or culvert. Bridges that are rated as poor are not necessarily unsafe. Unsafe bridges are closed.
